### **Detailed Action**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-53, drawn to a wire feeder and to methods of providing wire, classified in class 219, subclass 137.7.
- II. Claims 54-61, drawn to methods of arc welding wherein pulse power is supplied to the welding arc, classified in class 219, subclass 130.51.

Inventions II and the apparatus portion of invention I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process of invention II does not require the particular apparatus of the apparatus claims in invention I.

Inventions II and the method claims of invention I are related as subcombinations of method steps disclosed as usable together in a single combination of method steps. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a method of welding that does not include the specific control limitations of invention II. See MPEP § 806.05(d).

Art Unit: 1725

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
